

Jia-Wun Goose Farm

Jia-Wun Goose Farm, established in 1976, began with part-time goose-raising of small scale on a rural site, has grown up to a commercialized enterprise nowadays. It has been constructed step by step to make the idea of animal factory realized. By carefully integrating new and efficient technologies, the farm is one of the leading farms which make goose farming gradually displays its new look instead of the traditional impression of pasture raising.

The 40,000 more breeders stocked by Jia-Wun Goose Farm are derived from the commercial white Roman goose line. Currently, over 1 million goslings were produced on the farm annually.

Jia-Wun Goose Farm genetically selects and establishes its own flock of geese along with introducing new blood ganders from Beidou White Goose LRI No. 1 which was bred by Changhua Animal Propagation Station of the Livestock Research Institute.

Jia-Wun Goose farm, being the pioneer of goose industry in Taiwan who exporting goslings to oversea markets in 2009, is still very active to develop the markets in Mainland China and Southeast Asia.

Jia-Wun Goose Farm- An Animal Factory Farm

Traditionally, goose flocks were raised by rivers or ponds. Taiwanese researchers have put a lot of efforts on introducing and developing the technique of water-pad cooling house systems for goose farming. With these efforts, it is possible that goslings are produced off-seasons by using environment-controlled houses. This technique has been well developed and extensively adopted by a lot of leading goose farmers. The Jia-Wun Goose Farm has successfully realized the idea of animal factory by using this decisive and breakthrough technology, and its production of goslings is year-round.
